Northeastern Plants of the Wetland Boundary

Course Description
Northeastern Plants of the Wetland Boundary is designed to equip participants with the knowledge and skills needed to identify commonly encountered plants on both sides of the wetland boundary in the North Central United States and adjoining Canada. The course covers fundamental plant identification, terminology, keying techniques, and field characteristics. A self-directed field component allows participants to submit digital photographs of identified plants for verification and engage with experts and peers through the course discussion forum.

Online Course Curriculum (24 hrs)

Northeastern Plants of the Wetland Boundary Discussion Boards
Discussion: Welcome and Introduce Yourself
Discussion: I have questions or comments

Northeastern Plants of the Wetland Boundary Online Lectures

- Welcome lecture
- Basics of Plant Taxonomy (Northeast)
- Trees – Part 1
- Trees – Part 2
- Trees – Part 3
- Shrubs
- Woody Vines
- Broad-leaved Forbs Part 1
